

TECHNICAL DATA

- Pipe Sizes: 20mm Pipe
- Suitable Pipe: 10 - 17mm
- Coil Length: 50m
- Warranty: 5 years guarantee against manufacturing defects.

CONDUIT PIPE

OVERVIEW

Introducing the KOMCON20 convoluted pipe, also known as flexible corrugated conduit, is designed with a 20mm inside diameter, making it ideal for accommodating underfloor heating (UFH) pipes with outside diameters of up to 17mm. This versatility allows it to support various types of underfloor heating pipes, including PexAl, PertAl, Pex, Pert, and Polybutene. One of its primary benefits is the creation of an insulating air cavity around the heating pipes, which helps prevent potential cracking of the floor screed.

KEY FEATURES

- Can be used for protecting electrical wires to machinery, pipe sleeving for plumbing etc.
- Used as a protective sleeve for where the underfloor heating pipes rises from the screed floor up to the manifold, as well as where any UFH pipes go through a expansion strip.
